

Subject: Application for Android Engineer (Field Product) – Dennis Njoroge Muhia

Dear Wave Hiring Team,

I am writing to express my enthusiastic interest in the **Android Engineer** position on the **Field Product** team at **Wave**. Having spent my career building scalable, high-performance mobile solutions in Kenya, I am deeply inspired by Wave's mission to make Africa the first cashless continent. I have witnessed firsthand how financial barriers—such as high fees and physical distance—impact small business owners and families. Joining a team that builds services that truly “*just work*” is a challenge I am eager to take on.

Currently, I work as a **Software Developer at Appcentric**, where I lead the development of complex **Flutter applications** and **Laravel-powered dashboards**. My experience aligns closely with the requirements of this role in the following ways:

Extensive Mobile Development Experience

I have over **five years of professional experience** in software development, with a strong focus on mobile and cross-platform solutions. I have successfully published applications such as **SFIT** to the Google Play Store and developed mission-critical tools, including a **Car Tracking & Fleet Management System** featuring live GPS tracking—experience that directly relates to Wave's geo-localisation initiatives.

Technical Adaptability

While my recent work has focused on **Dart/Flutter** and **JavaScript**, I have a strong foundation in **Java and Python** and adapt quickly to new technology stacks. I am excited about the opportunity to apply my frontend expertise within Wave's **Kotlin/Jetpack Compose** environment and to contribute to backend development where needed.

End-to-End Project Ownership

I am an independent engineer who takes ownership of the full development lifecycle—from UI/UX optimization and performance tuning to deploying secure, AWS-hosted applications. Previously, as an **ICT Consultant at Benmac Hospital**, I developed the ability to solve critical technical problems under pressure in environments where system reliability is essential.

Collaborative Mindset

I thrive in cross-functional teams and enjoy pairing with other engineers, participating in code reviews, and contributing to long-term code maintainability and product quality.

Based in **Nairobi, Kenya**, I am well-positioned to work within Wave's talent hub and am eager to travel to operational markets such as **Senegal or Côte d'Ivoire** to better understand users' real-world challenges.

Thank you for your time and consideration. I am excited about the possibility of helping Wave scale its impact across the continent and would welcome the opportunity to discuss how my technical background can support the Field Product team.

Sincerely,
Dennis Njoroge Muhia
